## VISCOSITY & FUEL QUALITY

#1114  
#1121

TriboVis Pro/TriboVis Pro 2 – Electronic viscosity test device with inbuilt heating for fuels and lubricants

The TriboVis Pro/TriboVis Pro 2 is an electronic falling ball viscosity meter with an inbuilt heating system for all kind of fuels and lubricants. The easy to use testing procedure enables the operator to get an instant result about the viscosity parameter of the bunker fuel or the lubricant in use.

The TriboVis Pro/TriboVis Pro 2 has the latest software installed. Several calculation options like e.g CCAI, injection and pumping temperature settings of fuels are installed to help the engineer operating the machineries with maximum efficiency.

**Order No.: 1114** (TriboVis Pro)

**Order No.: 1121** (TriboVis Pro 2)

## TriboVis Pro/TriboVis Pro 2

**Electronic viscosity test device with in-built heating for fuels and lubricants**

- Viscosity measurement at 40, 50 and 80°C
- Falling ball principle
- Includes viscosity measurement of gas oil
- Calculation of CCAI, injection temperature and other important parameters
- TribuVis Pro 2 incl. Density Test
