WIO

TriboWater - Analog Water Test

The **TRIBOWATER** is a classical analogue measuring device of Tribomar to determine water in fuel and lubricants. High quality materials makes this device robust and long lasting. The handling procedures of the TriboWater are straight and easy to understand to achieve reliable and repeatable results.

The TriboWater provides to the field engineer an easy to use measuring device, ideal for controlling the condition of the operational fluids on site.

Order No.: 1086

TriboWater

Analog Water Test

- Total range for water in oil : 0–2%
- 0-1% Standard or
- 0-2% fortail shaft monitoring [TMON]
- Robust metal housing
- Easy to use
- Applicable for all mineral based oils
